RELAX + LIFT MECHANISM

**A SIMPLE, BRAND NEW REMOTE
CONTROL THAT CAN BE OPERATED
INDEPENDENTLY. THE EXCELLENCE YOU
EXPECT FROM A PRODUCT MADE IN ITALY**

THE INDEPENDENCE TO REACH ANOTHER PLACE WITHOUT ASSISTANCE IS LIBERATING.

ENTERING A KERBED DRIVEWAY OR MANAGING A GRADIENT IS SIMPLE.

“ROBOTICA”EQUIPMENT

Sistema brevettato ROBOTICA, applicato su poltrona alza. The patented “ROBOTICA” system, integrated in the riser chair, permits independent, cable-free adjustment by means of a control bar on the arm rest. The drive wheels at the rear and the running wheels at the front of the chair allow movement in both home and outdoor environments, be there small gradients, uneven surfaces or grassy paths, giving freedom of movement to people with motor difficulties, however small or great these difficulties may be. The mechanism with its special system allows 360° rotation when stationary, allowing the user to turn even in the tightest of spaces. The lithium battery provides 30 days of cable-free domestic use or 20 km of outdoor use. Going to the kitchen for a glass of water or sitting in the garden will no longer pose a problem.

TV POSITION

This gives you the opportunity to relax in front of the TV, maybe even just raising your tired legs to curl up in your favourite position throughout the day

DOUBLE COVERING

Two coverings help to ensure that the armchair retains its condition over time, reducing any fear that a child or a dog cause permanent damage; in the event of a grease stain, the covering can be removed and washed with utmost ease

SEAT, BACK AND FOOT RESTS IN “MEMORY FOAM”

l”Memory Foam” is a thermo-sensitive material that reacts to the body’s own heat and moulds cleverly to the contours of the body, before reverting to its original form. The “Memory Foam”is of anatomical design thus offering excellent benefits to both circulation and spine (relaxing it naturally).

EXTENDABLE ARM RESTS

The arm rests can be removed with a simple action, reducing the width of the armchair and allowing passage even where doors are particularly narrow. This permits the seat to be inserted at height under the dining table and, if necessary, it becomes very practical to move to the bed as the seat is at the same height.

LIFTING SYSTEM

This system provides the Lift function, which is made possible by one or more shielded electric motors housed inside the armchair. The lifting process supports the user from a seated to a near upright position, facilitating easy lifting from the armchair. The lifting system is designed to be completely safe, as it can be operated only when the footrest is fully lowered. Thus the lifting movement is completely safe and simple and it requires no effort on the part of the user.

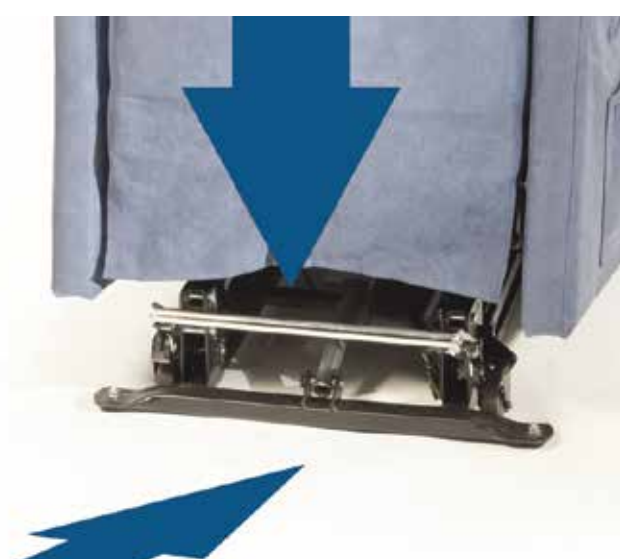

PULL-OUT TABLE

With its surface made of durable, washable material, the removable table is practical and can be used as a stand for reading, writing or drinking a relaxing herbal tea. Its modular structure makes storage simple.

TOTAL RELAX

The relaxing position affords the person comfort and rest and thanks to the particular construction materials used, the utmost comfort is afforded.

NEW ROLLER SYSTEM

The latest generation of high-quality technology also allows the chair to be rolled across deep pile rugs and carpets. Excellently soundproofed ball bearings render any movement almost silent and the neighbours will not be disturbed.

MAGNETOTHERAPY

As it is not dangerous, this therapy can also be used with the elderly and children; the only contraindications being in relation to those with "PACEMAKERS", those suffering from heart conditions, and pregnant women. Magnetotherapy can be highly useful in: easing pain and speeding up the healing of all fractures, sprains and dislocated joints caused by accidents or sports activities, including lumbar traumas; accelerating the healing of wounds and sores; treating myalgia, lumbago, osteoarthritis, epicondylitis, and all bone ailments of whatever kind; accelerating the bone recalcification process in those who have undergone fractures; effectively treating femoral osteotomy, fractures of the patella, surgical interventions to the knee or arm, injury to the neck or vertebra; treating phlebitis, oedema, lymphoedema, varicose veins, vascular diseases and ulcers of various kinds; treating all forms of ligament distortion. We always recommend seeking medical advice regarding certified contraindications before using magnetotherapy.

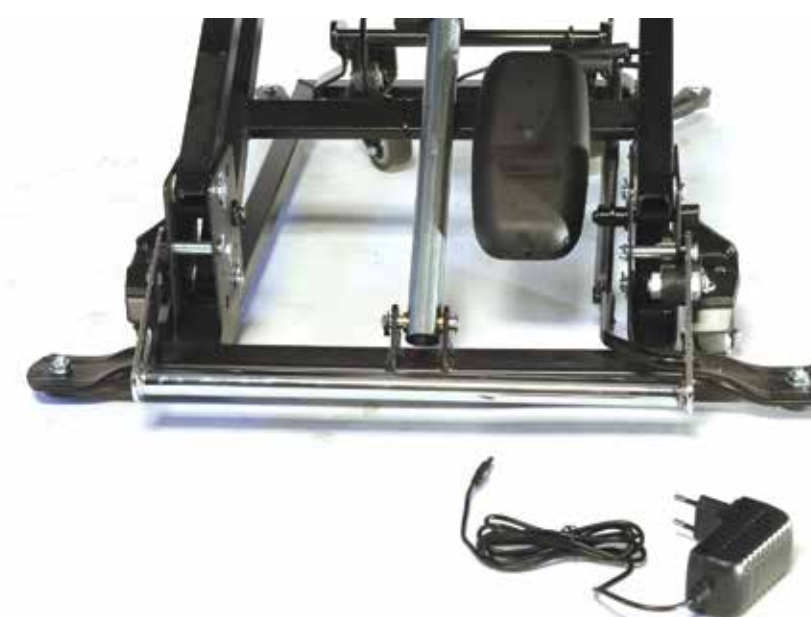

HEADREST CUSHION

Given the support that the cushion provides to the curvature of the cervical column, when placed in the most comfortable position, it makes for a great accessory at all times of the day.

READING LAMP

A beautiful LED lamp shines like a ray of sunlight, enabling better reading in low-light conditions. Being extensible, it does not create clutter as it stores away neatly. Draws power from the USB socket provided in the armchair.

ADDITIONAL BATTERY

Having the additional battery gives freedom from constraints and obstructions. The battery provides several days of autonomous functionality for all armchair functions, without power cables.

USB SOCKET

Having access to power through the USB socket on the armchair enables you to charge your mobile phone or tablet without having to bother with household socket outlets.

THERMO KIT

The heating system offers the possibility of having thermal areas in the armchair, in the seat, in the lumbar area and in the foot rest, to make cold days a thing of the past, without having to resort to central heating. The system consists of thermal cushions, placed at the body's pressure points.

EMERGENCY LIGHT

An LED lamp, mounted underneath the armchair, can be switched on by means of a button on the arm rest. Is useful in power-outages as an emergency light and useful for transfers from room to room during the night, removing the need to turn on the main light.

LUMBAR SUPPORT

The innovative lumbar support system provides an effective solution to the widespread problem of back ache and lower back pain. The lumbar support kit is an electromechanical device that offers two enormous advantages:

- it adjusts the depth of the backrest in the lumbar region, by up to about 10 cm, and provides effective and restful support to the lower part of the spine;
- thanks to the programme, a relaxing massage of the intervertebral discs is afforded through the continuously repeating movement of the lumbar cushion in the backrest. In the same way that an osteopath relieves fatigue in the back using his hand at the end of the day.

SUPPORT HANDLE

The handle is a steel support that helps the user to push or pull the armchair. Comfortable and elegant, it offers no encumbrance and complements the design of the back rest perfectly. osteopath relieves fatigue in the back using his hand at the end of the day.

THE "PLUS" STRUCTURE

A highly engineered mechanism guarantees safe movement in all positions, each of which has been tested and certified. With the reinforced system and the PLUS features, we guarantee all essential features of our armchairs even to persons of larger stature and weight.

VIBRO MASSAGE

The Life5Vibro massage system, a very unusual mechanism that consists in fact of no fewer than five vibration systems, located at various places within the relaxation chair and all individually operated, stimulates the circulation and creates a sensation of physical well-being.

***THE UNIQUE DETAILING, COUPLED WITH
THE HIGH QUALITY OF THE PRODUCTS,
RENDER LIVING ROOMS UNIQUE.
THE CHOICE OF FINISHES AND COLOURS
TRANSFORM THEM INTO WORKS OF ART.***

A SMALL TURNDOWN IS ALL THAT IS NEEDED TO CONVERT THIS SOFA INTO A BED. IT OPENS OUT LIKE A FLOWER TO PROVIDE A LARGE AND COMFORTABLE DOUBLE MATTRESS WITH HIGH QUALITY FEATURES THAT WILL BE APPRECIATED BY ALL YOUR GUESTS.

***WE DO NOT TAKE UP SPACE BUT WE DO
MAKE YOUR REST COMFORTABLE.***
